

Instruction: Fairweather 2 Way pannier / backpack

While using as pannier bag:

Remove shoulder straps and install them into back pocket. Please also make sure brackets at the bottom of the bag are also installed inside - this will prevent bag hitting the wheel or getting jammed.

Fit the rail hooks to the pannier rack and ensure the smaller silver hook that is attached with an elastic band is fitted through the elastic straps in the centre of the back of the pannier. Check the bag is safely fitted to the carrier rack. **pannier racks come with various railing sizes, adjust the rail hooks to the pannier rack diameter and make sure they are not moving around.*

If you have any sharp edges on the pannier rack, this may cause damage to the bag. Please avoid direct contact between the bag and any sharp points on the rack. Ask us at sales@tokyobike.co.uk or ask your local bike shops for advice.

While using as back pack;

Remove rail hooks and install centre hook into the back pocket.

Hook the shoulder straps to the bracket and adjust straps.
